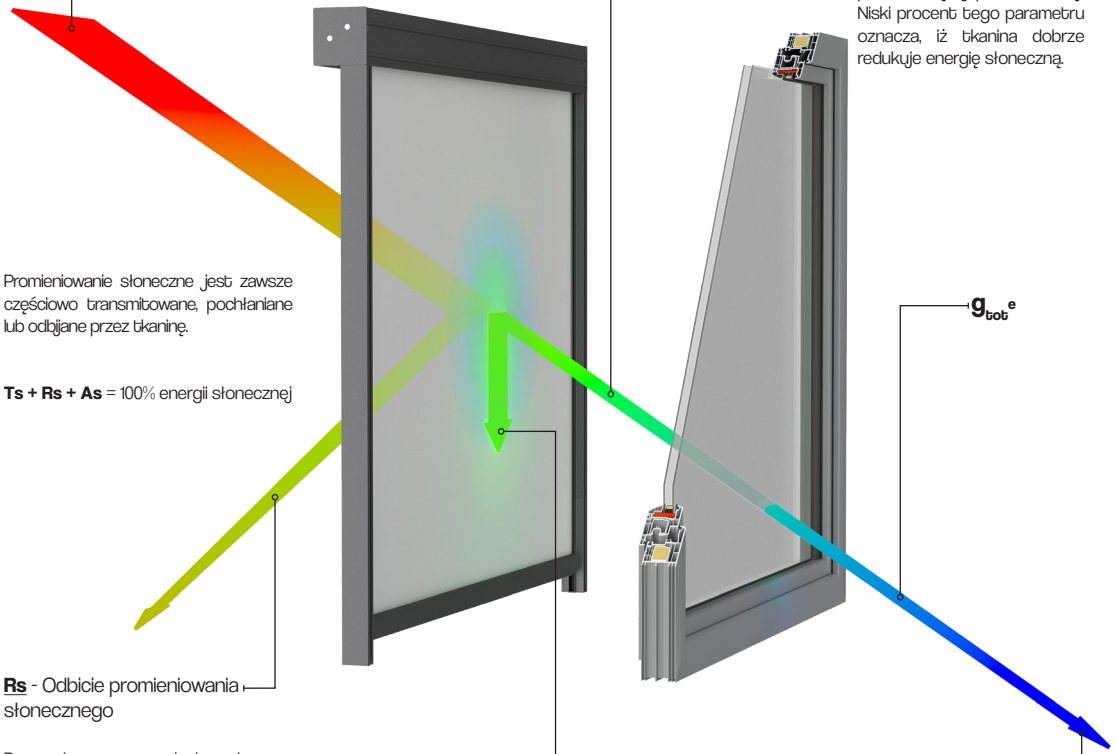
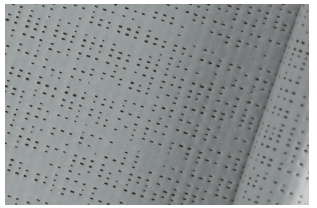
Tkaniny Screen

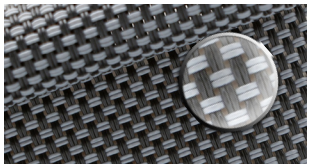
do systemu Veranda



SOLTIS 92 / SOLTIS 99

Poliestrowa tkanina techniczna pokryta PVC, produkowana w oparciu o opatentowaną technologię Precontraint Ferrari®. Zapewnia ona dużą stabilność tkaniny, która nie ulega odkształceniom w czasie użytkowania produktu, nawet przy dużych wymiarach. Wysokie parametry techniczne zapewniają użytkownikom pomieszczeń optymalny komfort optyczny i termiczny. Jakość komponentów użytych przy produkcji tkaniny gwarantuje trwałość kolorów. Dzięki gładkiej powierzchni, tkanina trudno ulega zabrudzeniom.





WSPÓŁCZYNNIK OTWARCIA

Względna powierzchnia otworów tkaniny określana jest niezależnie od koloru. Dla tkanin z tym samym splotem współczynnik otwarcia powinno się mierzyć na podstawie najciemniejszego koloru w kolekcji

Tkaniny akrylowe do systemu Veranda

Tkanina markizowa, będąca najbardziej reprezentatywną częścią markizy, nie tylko służy do ochrony przed słońcem, lecz również spełnia rolę elementu dekoracyjnego. Aby sprostać oczekiwaniom klientów, firma Selt posiada w swojej ofercie szeroką gamę wzorów tkanin, produkowanych przez wiodących europejskich producentów. Tkaniny powstają na bazie wysokogatunkowych materiałów i podlegają ciągłym testom. Dodatkowo, podczas procesu produkcji, tkaniny akrylowe zabezpieczono impregnatem na bazie Teflonu. Do produkcji markiz używa się tylko tkanin pierwszego gatunku, mając do dyspozycji najnowocześniejsze maszyny szwalnicze i wysokiej jakości przędze.

Tkaniny akrylowe

Tkaniny akrylowe gwarantują najwyższą jakość produktu, zapewniając komfort termiczny i ochronę przed promieniowaniem UV. Wyprodukowane w 100% z włókna akrylowego barwionego w masie chemicznej zapewniają doskonałą ochronę przed utratą koloru. Współczynnik odporności na promieniowanie UV wynosi od 7 do 8 w 8 stopniowej skali. Impregnacja środkiem typu TEFLON® lub SCOTCHGARD™ stwarza doskonałą barierę ochronną i wzmacnia właściwości hydrofobowe tkaniny, a ponadto zapobiega przywieraniu zabrudzeń do materiału. Odporność na przemakanie 330 mm wysokości słupa wody. Zaletą tkanin akrylowych jest również wysoka odporność na rozciąganie i rozrywanie.

Poniższe dane techniczne przedstawiają średnie wartości		
Skład:	-	**Akryl 100%, barwiony w masie**
Wykończenie:	-	**Teflon - Cleangard**
Waga:	**DIN EN 12127**	**~ 300 g/m²**
Szerokość:	-	**120 cm**
Trwałość koloru:	**DIN EN ISO 105-B02**	**7-8 / 8**
Olejoodporność:	**EN ISO 14419**	**4-5**
Odporność na wodę:	**EN ISO 4920**	**100**
Wysokość słupa wody:	**EN 20 811**	**~ 330 mm**
Wytrzymałość na rozciąganie (daN/5 cm):	**DIN EN ISO 13934-1**	**~ 140 / 95**
Odporność na rozdarcie (daN) Wątek / Osnowa:	**EN ISO 13973-2**	**2.3 / 4**
